

LTE site ATP audit

Providing LTE site ATP audit services

Overview

In today's extremely competitive telecom market, it is imperative for a service provider to ensure that the network sites are implemented as per plan and the site ATP is completed as per defined policies and procedures, bringing in overall operational efficiencies.

Service offering

TCTS LTE site ATP audit assists operators in identifying potential deviations/ gaps between design v/s actual implementation and recommendations for correcting the same. The site ATP audit assures that:

- Sites are implemented as per the detailed design and there are no gaps
- Site ATP procedures and processes are implemented as defined
- Site Implementation standards and guidelines are effectively met
- Applicable guidelines, regulations and policies are followed
- Recommendations for corrective actions for the deviations observed
- Recommendations on industry best practices to be adopted
- Site Installation standards are as per industry best practices

Drive efficiencies | Enhance customer experience

Operation Model

TCTS	
Study and assessment	Field data
Validation and verification	Gap analysis
Recommendations	Implementation

Value proposition

Our network services support model along with extensive domain expertise from providing services to some of the leading operators across globe project us as a preferred partner for providing enhanced wireless systems service provider. TCTS is committed to providing world-class services to its customers along with continuous advancement and innovation.

The following capabilities help deliver our customers, professional services for enhancement of your operational competencies:

- **Multi domain expertise:**

Our SMEs have vast experience on telecom technology platforms and have cross technology expertise making us technology specific vendor agnostic service provider. The requirements that go into planning, operating and providing a rich customer experience are well understood by our experts combined with our experience with globes leading service providers associations

- **Tools expertise:**

TCTS possesses a strong team of experts with practical exposures to leading tools and test and measurement devices used in telecom space across technologies which enable us to plan and execute customer deliveries with available tools at service provider's end

- **Scalability and flexibility:**

With presence in major geographies globally we are a preferred partner to provide and ramp up resource requirements on need basis from a pool of SMEs within TCTS
